

Yasmine Adel

Backend Engineer

yasmine.adel.dev@example-mail.com | Cairo, Egypt

Summary

Backend engineer with 5 years of experience across fintech and logistics domains, with a strong focus on data correctness in systems where an error compounds silently if not caught early.

Experience

Backend Engineer, Cedar Logistics Platform (2021 - Present)

- Rebuilt the shipment-tracking reconciliation job after discovering it silently dropped events during a specific type of network partition, causing a slow drift between our records and carrier records that had gone unnoticed for months; the fix included a daily automated reconciliation check that now catches this class of drift within 24 hours.
- Led the design of an idempotent event-ingestion pipeline (Kafka, Go) after a duplicate-processing incident double-billed a batch of customers; presented the design and postmortem to the wider engineering org.
- On-call for the shipment-tracking service; wrote the current incident runbook after finding the previous one was two years out of date and had caused a slower response during a recent incident.

Backend Engineer, Cedar Logistics Platform (2019 - 2021)

- Built the carrier-integration API layer supporting five shipping partners, each with different data formats and failure semantics.
- Introduced contract tests between the tracking service and its two main consumers after a schema change broke one silently.

Education

B.Sc. in Computer Engineering, Cairo University

Skills

Go, Kafka, PostgreSQL, distributed systems design, contract testing, incident response
