Sara Mansour

Backend Engineer

sara.mansour.dev@example-mail.com | Cairo, Egypt

Profile

Backend engineer with 4 years of experience building internal platform tooling and APIs, mostly in Python and Go. Comfortable owning a service from design through production rollout and on-call rotation. Interested in developer tooling, observability, and systems that reward careful thinking about failure modes.

Experience

Backend Engineer, Orbital Ledger — Cairo, Egypt (Remote) — Mar 2021 – Present

- Built the internal ledger reconciliation API used by 12 engineering teams, replacing a nightly batch job with a near-real-time pipeline. Reduced median reconciliation latency from 6 hours to 4 minutes and eliminated a class of silent data drift that had been causing month-end close delays.
- Introduced structured logging across the internal tooling platform, standardizing correlation IDS and cutting mean time to locate a stuck transaction from roughly 40 minutes to under 5 minutes.
- Mentored two junior engineers through their first production rotations and led weekly incident reviews that produced 14 documented runbooks.

Software Developer, Helios Internal Tools — Remote — 2019 – 2021

- Maintained a set of internal dashboards and admin tools used by customer operations teams.
- Added bulk import to the internal tools API, reducing manual data entry by an estimated 20 hours per week.

Education

B.Sc., Computer Engineering, Cairo University, 2019

Skills

Python, Go, PostgreSQL, Redis, Kafka, Docker, Kubernetes, AWS, Prometheus, Grafana
